Attribute- and relationship syntax extension:

Attributes can have postfixes in their name:
[L] Language-dependant.
[N] Multivalued
[T] Temporal (historicised)
(can appear in any combination)
These attributes violate strict 1 NF and have to be resolved in the data model with detail tables. (with language, period or sequence-nr)

Relationships with [T] are temporal and have to be resolved in the data model with an period-dependent intersection entity.

Information model
U * Name
* Target environment
* Version
o Description
* Main language
o Languages [N]

Exclusive relation
U * Number

Entity
U * Name [L]
o Description [L]
o Short Description [L]
o Synonym [LN]
U o Short name

Relation End
U * Relation end type
o Association [L]
* Cardinality
* is mandatory
o is historicized

Relation
many-to-many Relation
Role Relation
Functional relation

Entity key

Category
U * Name [L]
o Description [L]

Key element

Generic element

Example
U * Value

Additional property
U * Name
o Value

Attribute
U * Name
o Description [L]
o Display name [L]
o Short Description [L]
o Display sequence
* is mandatory
o is repeated
o is language-dependent
o is encrypted

Entity Attribute
* is descriptive

Domain Attribute

Domain
U * Name [L]
o Description [L]

Text domain
o Min length
o Max length
o Value rule

Time domain
o Min Time
o Max Time
* Granularity

Boolean domain

Group domain

Numeric domain
o Total digits
o Fractional digits
o Min value
o Max value
o Rounding unit

Binary domain

Value list

Physical unit
U * Symbol
o Description [L]
o SI unit

Allowed value
* Value
* Display text [L]
o Sort order
o Description [L]
